

The Luna-FL™ is a fluorescence cell counter that measures cell viability and counts cells. The most advanced integrated fluorescent optics sets the Luna-FL™ apart from other cell counters by providing unparalleled counting speed and accuracy of any cell type.

Accelerate your research with the ultimate automated cell counter, the Luna-FL™.

Luna *fl*™

The Ultimate Automated Cell Counter

The Ultimate Automated Cell Counter

The Luna-FL™ automated cell counter is a stand-alone compact instrument with combined fluorescence microscopy and image analysis software. Its interactive touch screen interface allows for easy and accurate results.

Luna *fl*™

Dual Fluorescence Cell Counting

The Luna-FL™ automated cell counter from Logos Biosystems is a quantum leap for automated cell counting and cell viability analysis. The Luna-FL™ automated cell counter gives you sensitive and accurate live/dead cell counting results without limitation of cell types.

Unlike immortalized cell lines, primary cells such as PBMCs, splenocytes, neutrophils, and stem cells have been difficult to count with conventional cell counters such as Coulter counter or image-based automated cell counters that utilize bright field optics. Primary cells are often contaminated with undesirable debris, which can be confused for cells with the conventional cell counters. The Luna-FL™ is integrated with dual fluorescence microscope optics to overcome this problem. Live/dead cells are stained with the green/red fluorescence dye, and the labeled cell images are analyzed with accurate image analysis software.

Dual Fluorescence Automated Cell Counter

Cell Counting Slide

Patented design of the Luna counting slide has precision chamber height to evenly distribute the cells throughout the chamber.

Smarter than Ever

Don't Always Need Fluorescence ? Bright Field Optics Is Incorporated For Trypan Blue Cell Counting

Luna-FL™ also inherited the proven performance of the Luna™ automated cell counter. The precision bright field microscope optics of the Luna™ is integrated in the Luna-FL™ to provide the convenient features of trypan blue stained cell counting. The powerful and accurate cell counting algorithm of the Luna™ is still available with the Luna-FL™.

Luna-FL™ = Luna™ + Dual fluorescence cell counter

Interactive Software Interface

Powerful On-board Analysis

After the cell counting operation is performed, integrated analysis software gives immediate viability data which is reported on the Luna-FL™. For validation purposes, living cells are conveniently circled in green and dead cells in red.

Image Overlay

The analyzed images from each channel (bright field, green, and red channel) can be merged directly on the screen. The brightness of each color can be adjusted independently for the accurate monitoring. Images can then be saved to the USB drive for storage, transfer, or future analyses.

Cell Size Gating

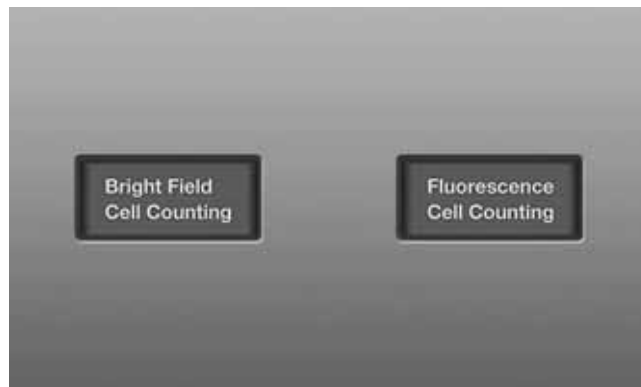

Counted cells can be gated based on the cell size information. Using a histogram to display live and dead cell populations, particles can be easily excluded or included by simply defining the cell size to include in the count data.

Data Report

The analyzed data can be easily saved as a PDF report or CSV file. Cell counting results, cell image data, and a various types of histograms are integrated into a single PDF file and transferred via a USB drive. Data from previous cell counts (up to 1,000 counts) are archived on the Luna-FL™ if future analysis is required.

Minimal Running Cost

Automated cell counters utilize disposable counting slide to eliminate washing steps of manual cell counting with glass hemocytometer. Logos Biosystems has developed innovative T-Bond technology (patented) to manufacture the precision cell counting slides more efficiently. The unit price of slide is almost half of other brands, saving cost for heavy users.

Specifications

Sample Volume	10 µl
Cell Counting Time	30 sec
Cell Concentration Range	5×10 ⁴ - 1×10 ⁷ cells/ml
Cell Size Range	Detectable Range: 1 - 90 µm Optimal Range: 5 - 60 µm
Excitation wavelength	470 ± 20nm
Emission wavelength	525 ± 25nm, 600 nm (LP)
Light Source	LED
Image Resolution	5 MP
LCD Display	7 inch (800 x 480 pixels)
Dimensions (WxDxH)	22 x 21 x 9 cm (8.6 x 8.3 x 3.5 inch)
Weight	1.8 kg (4 lb) *without the external power adaptor

Ordering Information

Cat#	Product
L20001	Luna-FL™ Automated Fluorescence Cell Counter
	Luna-FL™ Cell Counting Slides:
L12001	50 slides (100 counts)
L12002	500 slides (1,000 counts)
L12003	1,000 slides (2,000 counts)
L12004	2,500 slides (5,000 counts)
F23001	AO/PI cell viability kit
F23202	Yeast viability kit
T13001	Trypan blue stain 0.4% for use with Luna™ and Luna-FL™ automated cell counter

Cell Lines Validated

On The Luna-FL™ Automated Cell Counter

Cell Type	Vendor	Cat. No.	Animal	Organ
PBMC	Primary Cell		Mouse	Blood
Splenocyte	Primary Cell		Mouse	Spleen
Thymocyte	Primary Cell		Mouse	Thymus
